QuestionAnswer What are the main components of the cell membrane in Ethiopian grade 11 biology? The main components of the cell membrane are phospholipids, proteins, cholesterol, and carbohydrate chains, which work together to regulate the movement of substances in and out of the cell. How does photosynthesis occur in plant cells as explained in Ethiopian grade 11 biology? Photosynthesis occurs in chloroplasts where light energy is converted into chemical energy. It involves the absorption of light by chlorophyll, splitting of water molecules (photolysis), and the synthesis of glucose from carbon dioxide and water. What is the significance of osmosis in plant and animal cells in Ethiopian grade 11 biology? Osmosis is the movement of water from a region of lower solute concentration to higher solute concentration across a semi-permeable membrane. It helps maintain cell turgor in plants and regulates water balance in animal cells. Describe the process of cellular respiration as covered in Ethiopian grade 11 biology. Cellular respiration is a process where glucose is broken down in the presence of oxygen to produce energy in the form of ATP, along with carbon dioxide and water as by-products. It occurs in the mitochondria through glycolysis, the Krebs cycle, and electron transport chain. What are the differences between prokaryotic and eukaryotic cells according to Ethiopian grade 11 biology? Prokaryotic cells lack a nucleus and membrane-bound organelles, are generally smaller, and include bacteria. Eukaryotic cells have a nucleus, membrane-bound organelles, and are found in plants, animals, fungi, and protists. How are enzymes important in biological processes discussed in Ethiopian grade 11 biology? Enzymes are biological catalysts that speed up biochemical reactions by lowering activation energy, thus facilitating processes like digestion, energy production, and DNA replication without being consumed. Explain the concept of genetic inheritance as taught in Ethiopian grade 11 biology. Genetic inheritance involves the transmission of genetic traits from parents to offspring through genes located on chromosomes. Mendelian principles such as segregation and independent assortment explain how traits are inherited. What are the major differences between DNA and RNA in Ethiopian grade 11 biology? DNA is double-stranded, contains deoxyribose sugar, and carries genetic information. RNA is single-stranded, contains ribose sugar, and is involved in protein synthesis. DNA is more stable, while RNA is more transient. How do ecosystems function, and what is the role of producers as discussed in Ethiopian grade 11 biology? Ecosystems function through the flow of energy and cycling of nutrients among organisms and their environment. Producers, mainly green plants and algae, convert solar energy into chemical energy via photosynthesis and form the base of the food chain.
